### South East Metro Amateur Radio Club

### Newport Tower: Remembering the Milwaukee Road Railroad

On October 9<sup>th</sup>, 2010, the South East Metro Amateur Radio Club (SEMARC) along with the Newport Model Railroad Club ([www.newportclub.us](http://www.newportclub.us)) commemorated the 104<sup>th</sup> anniversary of Newport Tower located in Newport, Minnesota, USA by a Special Event Station.

There was heavy rail traffic that day with 22 trains passing the tower. This made logging especially interesting as the tracks are very close!

This tower was built by the Milwaukee Road in 1906 to manage the confluence of railroad traffic into the cities of St. Paul and Minneapolis originating primarily from Chicago, Illinois. Railroads managed by Newport Tower were The Milwaukee Road, Chicago, Burlington & Quincy and The Rock Island.

The tower remained in operation until late 1983. Facing eminent destruction by the railroad, the City of Newport, city businesses and the Newport Model Railroad Club facilitated the tower's move to its present location on December 11, 1984.

The upper level where we broadcasted from is about 90% restored with its control levers and other signaling equipment.

#### Special Event Location Details

Newport 55055 -92.9981W  
Washington County - Minnesota 44.8722 N  
Grid Square EN34MU Elev. 741 Feet
